/UI-E-DX0 is a cDNA library containing the following tissue(s): fetal eyes. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonuclectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library as AGAATCAAGA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                127
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             organism="Homo sapiens"

Liew, University of Toronto, Ontario, Canada. mRNA was purified from human fetal hearts (8-10 wks). cDNA was synthesized using a XhoI-Oligo dT adaptor primer. EcoRI adaptors were ligated, followed by digestion with XhoI, for directional cloning into predigested lambda ZAP Express."

The sequence contained an oligo-dT track that was present in the
oligonuclectide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the NotI site
and the oligo-dT track served to verify it as a clone from the
non-normalized heart library cDNA Library Preparation: M.B. Soares
Lab Clone distribution: clones will be available through Research
Genetics (www.resgen.com) The following repetitive elements were
found in this cDNA sequence: 1-24, AT_rich#Low_complexity
Seq primer: M13 Forward
polyNa-yes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Norway rat.

MAPPING INFORMATION
                                           all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (1.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                          NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                   restriction digest.
                                                                                                                               This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate
                                                                                                                                                                                                                                                                          St. Louis MO 63108, USA

This clone was mapped by Grieff, M., Whyte, M. P., Thakker, R. and Mazzarella, R. Sequence analysis of 139 kb in Xp22.1 containing spermine synthase and the 5' region of PEX. Genomic 44:227-231 (1997). Genomics

FEATURES

GM07297-F, from Robert Nussbaum at the University of Pennsylvania School of Medicine. Please contact the Lawrence Livermore Nation Laboratory at http://www-bio.llnl.gov/genome to obtain the clone. This clone The source of the chromosomes was a r Lawrist16 from Robert Nussbaum at the University of Pennsylvania Medicine. Please contact the Lawrence Livermore National was a human/hamster hybrid COSMID LIBRARY LLOXNCCO1

It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary, Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   as soon as it is available and the accession number will be preserved.

Length 188818;

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap

between neighboring data submissions.

Female blood DNA was isolated from one randomly chosen donor (out of 10 female donors) and partially digested with a combination of EcoRI and EcoRI Methylase for library segments 1&2 or either MooI or DpnII for library segments 3&4. Size selected DNA was cloned into the pBACe3.6 vector between the EcoRI sites for library segments 1&2 or the BamHI sites for library segments 3&4. The ligation products were transformed into DH10B electrocompetent cells (BRL Life Technologies). The library has been arrayed into 3&4 well microtiter dishes and also gridded onto 22x22cm nylon high density filters for screening by probe hybridization.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The RPCI-13 Human Female BAC Library was constructed using improved cloning techniques developed by Kazutoyo Osoegawa. The library was generated by Baohui Zhao in our laboratory. Construction was funded by a grant from the National Human Genome Research Institute (NHGRI, NIH) (#1R01RG01165-03). The library was generated according to the new NHGRI/DOE 'Guidance on Human Subjects in Large-Scale DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mapping information for this chone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SOURCE INFORMATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MAPPING INFORMATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the right is RP11-621120, 2000 bp overlap.
Actual start of this clone is at base position 1 of RP13-588120;
actual end is at base position 43117 of RP11-621120.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Data from AC108928 was used to finish this clone, AC110999. of Molecular and Human Baylor Plaza, Houston, 5 (bases 1 to 158785) Direct Submission
Submitted (01-MAY-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA Worley, K.C. Direct Submission Submitted (07-MAR-2002) Direct Submission) Human Genome Sequencing Genetics, Baylor College TX 77030, USA Center, Depar of Medicine, Department

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are c sequenced and submitted once, so the sequence for the remainder the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing. Submitted (25-JUL-2002) Human Genome Sequencing Center, Depaid Molecular and Human Genetics, Baylor College of Medicine, Baylor Plaza, Houston, TX 77030, USA On May 1, 2001 this sequence version replaced gi:13877202. INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email r of

ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome
of a local database that includes entries
local mapping efforts. Res. 7:541-550) searches dbSTS, GDB, and

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (aspect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation. SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

UI=DXO is a cDNA library containing the following
UI=BXO is a cDNA library containing the following
according to Bonaldo. Lennon and Soares, Genome Research,
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adiptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonucleotide used to prime the synthesis of
lirst-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is AGAATCAAAA. This library
sequence tag for the program, Gene Discovery in the Visual
System, supported by National Eye Institute (NEI)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 3875, Application US/09764877

Patent No. US20020147140A1

GENERAL INPORMATION:
APPLICANT: Rosen et al.

TITLE OF INVENTION: Nucleic Acids, Proteins, and Antibodies
TILE REPRENCE: PCOOS
CURRENT APPLICATION NUMBER: US/09/764,877

CURRENT FILING DATE: 2001-01-17

Prior application date removed - refer to PALM or file wrapper NUMBER OF SEQ ID NOS: 4031

Sequence 288, Application US/09070927A

Patent No. US2020120116A1

GENERAL INFORMATION:

APPLICANT: Charles A. Kunsch

Steven Barash

TITLE OF INVENTION: Enterococcus faecialis Polynucleotides and Polypeptides

NUMBER OF SEQUENCES: 982

CORRESPONDENCE ADDRESS:

ADDRESSEE: Human Genome. Sciences, Inc.

STREET: 9410 Key West Avenue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The present sequence is the cDNA encoding the human chisel gene (Csl) that is mapped to the human chromosome Xq21.3-q22. It comprises 5 exons. It is a member of the EF-Hand protein super family and is involved in signalling pathways. It is predominantly expressed in heart and skeletal muscles and is activated after the differentiation of cells. Csl functions in regulation aspects of differentiation or adaptive processes that maintain muscle homeostasis. This sequence can be used in the detection, diagnosis, prophylactic and therapeutic treatment of diseases such as those involving aberrant muscle cell development and functional activity. It is also used in the treatment of muscular and myotonic dystrophies skeletal myopathies such as buchemne muscular dystrophy and myocarditis, myofiber atrophy, heart failure, cardiac hypertrophy, myofiber atrophy, etc. The Csl gene sequence can also be used in gene therapy, for the production of transgenic animals and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human, congestive heart failure, dilative cardiomyopathy; sudden death, hypertrophic cardiomyopathy; ischaemic cardiomyopathy; rhythm disorder; heart muscle disease; conduction disorder; coronary heart disease; exterial hypertension; pulmonary hypertension; endocarditis; pulmonary heart disease; valvular heart disease; pericardial disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                      The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Chisel gene; Csl; EF-Hand protein super family; muscle development; hear(Fakeletel muscle cell development; signalling pathway; regulation; Xq21.3-q22; adaptive process; muscle homeostasis; skeletal myopathy; detection; diagnosis; prophylaxis; treatment; cardiac hypertrophy; muscular and myotonic dystrophy; Duchenne muscular dystrophy; therapy; Becker's myotonic dystrophy; heart failure; differentiation; exon; gene therapy; transgenic animal; drug screening; ss.

cDNA encoding murine chisel (Csl) gene.
       tissues and their corresponding proteins. The invention also relates to methods for assessing the expression level of these genes. The method for assessing the expression level of these genes. The method for a use for testing the predisposition of mammals and preferably humans for a heart disease or for an acute state of such a disease. It is also useful to treat disease of the heart such as congestive heart failure, dilative cardiomyopathy, specific heart muscle disease, rhythm and conduction disorders, syncope and sudden death, coronary heart disease, systemic arterial hypertension, pulmonary hypertension, pulmonary heart disease, valvular heart disease, congenical heart disease, pericardial disease and endocarditis. Sequences of the invention are also used in gene therapy. A transgenic non-human mammal comprising the sequences of the invention are useful for the development for medicaments for the treatments of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying a subject at risk for a heart disease e.g. congestive heart failure, dilative cardiomyopathy, heart muscle disease, by quantifying the polypeptide expressed by genes abnormally expressed in heart tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       patent discloses novel target genes abnormally expressed in heart

that is mapped to the mouse X circomosome. It is a member of the EP-Hand protein super family and is involved in signalling pathways. It is protein super family and is involved in signalling pathways. It is proteinmantly expressed in heart and skeletal muscles and is activated after differentiation of cells. Cal functions in regulation aspects of differentiation or adaptive processes that maintain muscle homeostasis. This sequence can be used in the detection, diagnosis, prophylactic and therapeutic treatment of diseases such as those involving aberrant muscle call development and functional activity is also used in the treatment of muscular and myotonic dystrophies, skeletal myopathies such as Duchenne muscular dystrophy and Becker's myotonic dystrophy, heart failure, cardiac hypertrophy, myocarditis, myofiber atrophy, etc. The Cal gene sequence can also be used in gene therapy, for the production of transgenic animals and for drug screening.

AAX10269-X12937 are human DNA fragments which contain biallelic polymorphic markers which have been isolated using the primers crepresented in AAX09121-X10268. The base occupying the polymorphic site indicated by the appropriate IUPAC-IUB ambiguity code. These fragments can be used in methods for determining polymorphic forms in an individual corn see in e.g. forenaiscs, paternity testing or for phenotypic typing for diseases such as agammaglobulinemia, diabetes insipidus, Lesch-Nyhan syndrome, muscular dystrophy, Wiskott-Aldrich syndrome, Fabry's disease, familial hypercholesterolemia, polycystic kidney disease, hereditary spherocytosis, von Willebrand's disease, tuberous sclerosis, hereditary hemorrhagic telangiectasia, familial colonic polyposis, Bhlers-Danios syndrome, osteogenesis imperfecta, acute intermittent porphyria, hemorrhagic telangiectasia, familial oclonic polyposis, shreditary hemorrhagic telangiectasia, familial oclonic polyposis, shreaticary system, infection by pathogenic microorganisms, and characteristics such as longevity, appearance (e.g. baldmess, obesity), strength, speed, endurance, fertility, and susceptibility or receptivity to particular drugs or therapeutic treatments. The isolated polymorphic nucleic acid segments can also be used to produce medicaments for the treatment or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polymorphism; biallelic; human; forensic; paternity testing; disease; detection; phenotypic typing; characteristic; infection; hereditary; autoimmune disease; cancer; inflammation; drug; therapy; medicament;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides the protein and coding sequences of a number of apoptosis associated proteins from the yeast Saccharomyces cerevisiae and the fungus Candida albicans. These can be used to identify treatments for fungal and yeast infections, for proliferative diseases and for apoptosis related diseases such as autoimmune diseases, ischaemia and neurodegeneration. The present sequence is one of the C. albicans coding sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Yeast and fungal nucleic acids encoding proteins involved in a pathway leading to programmed cell death, useful for treating proliferative disorders, yeast and fungal infections, or for preventing apoptosis in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polymorphism; biallelic; human; forensic; paternity testing; disease; detection; phenotypic typing; characteristic; infection; hereditary; autoimmune disease; cancer; inflammation; drug; therapy; medicament;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient, cancer in a patient,
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
(e) selecting a composition for inhibiting prostate cancer in a patient;
(f) assessing the prostate call carcinogenic potential of a compound;
(g) determining whether prostate cancer has metastasized in a patient;
(h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer -

                                                                                                                                                                                                                                 AAX10269-X12937 are human DNA fragments which contain biallelic
polymorphic markers which have been isolated using the primers
represented in AAX09121-X10268. The base occupying the polymorphic site
is indicated by the appropriate IUPAC-IUB ambiguity code. These fragments
c is indicated by the appropriate IUPAC-IUB ambiguity code. These fragments
c an be used in methods for determining polymorphic forms in an individual
c for use in e.g. forenaids, paternity/festing or for phenotypic typing for
diseases such as agammaglobulinemia, diabetes insipidus, Lesch-Whan
c syndrome, muscular dystrophy, Wiskott-Aldrich syndrome, Fabry's disease,
c familial hyperrcholesterolemia, polycystic kidney disease, hereditary
c spharcome, osteogenesis imperfected, acute intermittent porphyria,
c stroatome, osteogenesis imperfected, acute intermittent porphyria,
c stroatome, osteogenesis inflammation, cancer, diseases of the nervous
c system, infection by pathogenic microorganisms, and characteristics such
c system, infection by pathogenic microorganisms, and characteristics such
c as longevity, appearance (e.g. baldness, obesity), strength, speed,
c endurance, ferrility, and susceptibility or receptivity to particular
c crugs or therapeutic treatments. The isolated polymorphic nucleic acid
c contains can also be used to produce medicaments for the treatment or
